

The Original Slush Mug

Instructions

1. Place white tumbler (Glaciercore) into the coldest part of the freezer. (It should be -10° Fahrenheit or colder.)
2. For best results, store tumbler in freezer for at least 6-12 hours for each use. You can tell when the tumbler is ready by pressing it with your fingers - if it feels soft it's not ready; if it's solid it is ready to use.
3. Add your beverage ingredients and fill to one inch from the top. Add cold or refrigerated beverages. Room temperature beverages will take longer to work.
4. As slush forms on the tumbler walls, stir with a spoon and scrape slush from the sides. To accelerate the slush process, stir/scrape every 2-3 minutes until you reach desired slush or smoothie consistency.

Care of your Slush Mug

- Wash out white Glaciercore before each use. Hand washing is best. Some dishwashers are too hot and may deform the core.
- Store in freezer when not in use.
- Discard Glaciercore if a cut or break occurs. (Refrigerant solution is non-toxic.)

Helpful Tips

- Average slush/smoothie time is 6-8 minutes. Fruit juices and soda slush the fastest. Milk-based beverages make take an additional 3 minutes (skim milk works faster).
- Beverages with artificial sweeteners will not slush properly.
- Use beverages that are chilled for best results.
- Pour slush into a cup or bowl. After serving, rinse tumbler and place back into freezer for quicker freeze time.
